

# WIRELESS WAN (WWAN) OPTIMIZATION AND LIFECYCLE MANAGEMENT

**Reduce your wireless costs and improve visibility with specialized automation and optimization focused on 5G / 4G LTE technology**

Using 5G / 4G LTE is a reliable, flexible and efficient way to deliver your enterprise network across all your remote locations. However, it can be expensive to implement and difficult to maintain. Now you can control your wireless Wide Area Network (WAN) technology and billing costs and improve visibility without sacrificing any of the benefits. Using real-time data, Network Management System (NMS) integrations and a powerful logic engine, vMOX expertly removes your “cost of network insurance” while avoiding large overage risk. This allows you to mitigate the financial impact of managing uncertainty.

#### Maximized Savings

Identify and leverage unbilled usage, ensuring you only pay for the services you use while optimizing your network capacity and cost-efficiency.

#### Expert Contract Negotiations

Secure the best possible terms and conditions for your wireless WAN contracts with our experienced team of negotiators work diligently to ensure you achieve maximum value and long-term savings.

#### Real-time Data Insights

Harness the power of real-time data to make informed decisions, optimize performance, and drive innovation across your organization.

#### Customizable Solutions

Work closely with our experts to develop tailored wireless WAN optimization solutions that address your specific business challenges and objectives.

#### Boosted Value with Scalability

Accommodate future growth without compromising on network performance or security with wireless WAN optimization solutions designed to scale with your business needs.

#### Enhanced Visibility Through Location-Based Reporting

Receive detailed, real-time insights into the location and status of your devices. Monitor and manage your assets more effectively and ensure optimal utilization and timely device adjustments so you can reduce energy consumption and improve overall performance.

#### Comprehensive Inventory Visibility

Get complete visibility into your device inventory, including location, phone line attachments, SIM (ICCID) information, service statuses, and plan details. More effectively manage your wireless WAN assets, optimize device allocation, and make informed decisions to enhance your network performance and minimize costs.
